

iJDMTOY.COM Tow Hook License Plate Mount Installation Guide

Before you get started, always double the fitment in the product description on our iJDMTOY website to make sure you have bought the correct ones for your vehicle.

Step 1: Remove the tow hole cover.

Step 2: Insert license plate mount stick. Make sure it's perpendicular to the opening. Slowly turn the stick clockwise until it catches on. To tighten the stick, use a wrench. Once the tow stick is fully tightened in, then it is time to mount the license plate bracket. You can use the metal flat washer and the spring washer included in the package to “sandwich” the bracket. This will increase friction to prevent spinning. Do not use power tools! Instead, use a regular Phillips screwdriver.

If you still experience some spinning issue, you can always use some Loctite. You can easily find the Loctite on google by searching "Loctite for screw"

Step 3: Then screw the license plate onto the tow hook plate bracket.
